

## **No Slightest Fault Should Be Allowed**

The following happened in September 2025 when the respected Comrade Kim Jong Un was guiding on the spot the construction of the Sinuiju Combined Greenhouse Farm and the work for regional development.

That day, feasting his eyes on the dramatically changing looks of the area, he expressed satisfaction and said: The service personnel and young people are really powerful. This island area, which was treated as barren only a year ago due to flooding every year, has turned into a “treasure island” with the great potential to lead the radical development of the regional economy and the improvement of the material life of the local people.

There should be no slightest fault in the construction of the Sinuiju Combined Greenhouse Farm as it is the work our Party has organized on the largest scale for the independent and diversified development of the regional economy and an important matter whose result is directly linked to the improvement of the material life of the regional people, he stressed.

Listening to what he had to say, the officials were moved as Comrade Kim Jong Un is devotedly working day and night to provide the people with the best things without caring about his health.

That day, they realized once again his noble outlook on people and his world of devoted service for the people.

And they were convinced that the people’s laughter would resound louder on this land and the brilliant future to be envied by the world would come earlier thanks to the devoted efforts of the fatherly leader to make his people happiest in the world.
